

**STURDY, QUIET & EASY  
TO INSTALL**

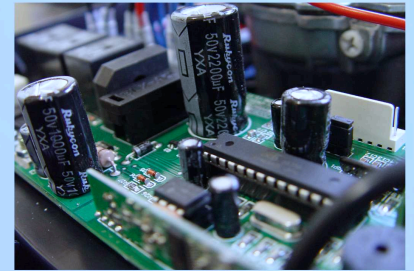

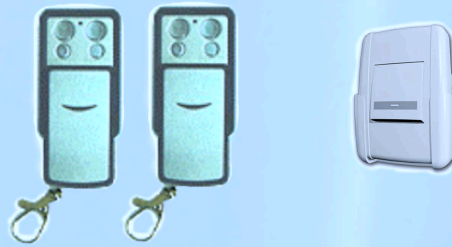

**ULTRA GATES**

· Thanks to the new ULTRA DOOR system it is now even easier to motorise a garage door. Just couple the transmission rail to the motor head and the automation is ready to install. ULTRA DOOR is quick to install and no modifications to the doors are necessary, it is attached to the roof in line with the centre of the door and is, therefore, an EASY and cost-effective system

· Greater possibilities: variable programming travel with precise limit sensitivities with automatic and manual force sensing to ensure that door reverses or stops when path is obstructed

· A complete automation comprising of control panel, a courtesy light and option of attached back up power failure batteries

**STATE-OF-THE-ART TECHNOLOGY, YET SO SIMPLE TO PROGRAM AND USE**

- Precise positioning of door is possible, through advanced electrical coding and scanning
- The release system allows manual opening and can be locked again during closure even when power is not available
- Smooth start-up and transition rate of motor reduces jerking, ensures quieter, faster and smoother operation
- For additional security, ULTRA products use the Keeleq rolling code technology from Microchip, offering 4.3 billion randomly chosen codes
- Optional auto closing function allows for automatic closing of door after three minutes, preceded by 15 second flashing warning light
- When opening or closing, the courtesy light comes on automatically and remains on for three minutes
- In the case of power difficulties, an external power supply can be easily connected to the system
- Built-in surge suppression ensures that all settings are retained in the event of power loss
- Specially designed for Australian and New Zealand installations

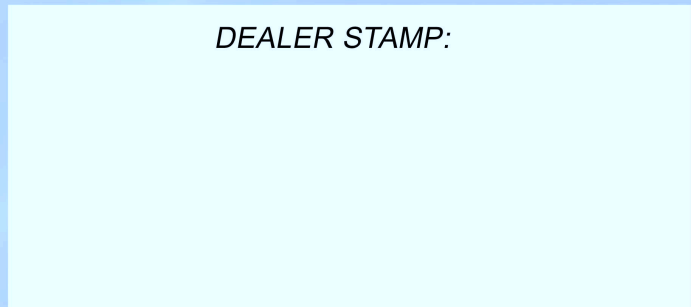

**KIT INCLUDES**

1 x Motor head, Track and chain (3.4 metres), 2 x T15 Remote controls (433 MHz RC), 1 x Remote receiver and antenna, 1 x Wireless wall push button switch, 1 x Manual release cord and handle, 1 x Push/pull arm, Mounting brackets  
Screws, bolts, nuts, washers and Installation manual

**ULTRA DOOR UD-2700 OPERATOR**

Power supply:	220 / 240 VAC 50Hz
Motor voltage:	24V DC
Lighting bulb:	10 WATT / 24 V
Operational speed:	120 mm/per sec
Radio frequency:	433.92 MHz
Motor output torque:	8 Nm
Max lift height:	2.7 metres
Max square metre:	12 m <sup>2</sup>
Operation temperature:	-20° C to +55° C
Auto courtesy light:	3 minutes
Guide track type:	Zinc steel
Protection class:	IP - 20
